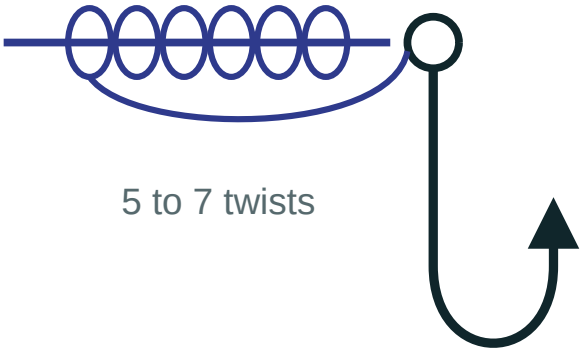
FISHY FRIENDS GUIDE

Two knots to know

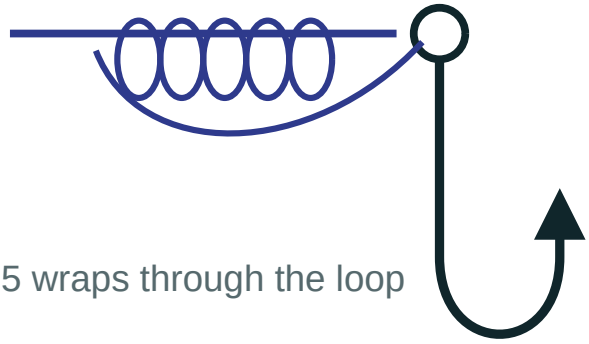
Good for: Bream, Flathead, Tailor, Kingfish, Whiting

Almost every rig uses one of these. Practise at home with thick string first.

Improved clinch knot



Uni knot



Wet it, pull tight, trim the end

YOU NEED

Line, a hook or swivel, and a bit of spit or water to wet the knot.

STEPS

1. Improved clinch knot: thread the line through the hook eye and pull 15 cm through.
2. Twist the end around the main line 5 to 7 times.
3. Push the end back through the small loop next to the eye, then through the big loop you just made.
4. Wet the knot, pull the main line tight and trim the end.
5. Uni knot: thread the line through the eye, lay the end back alongside the line to make a loop, and wrap the end around both lines and through the loop 5 times.
6. Wet it, pull the end to snug the wraps, then pull the main line to slide the knot down to the eye. Trim.

KID TIP Always wet the knot before pulling tight. Dry knots get hot and weak.

STAY SAFE Use nail clippers, not your teeth, to trim line.
