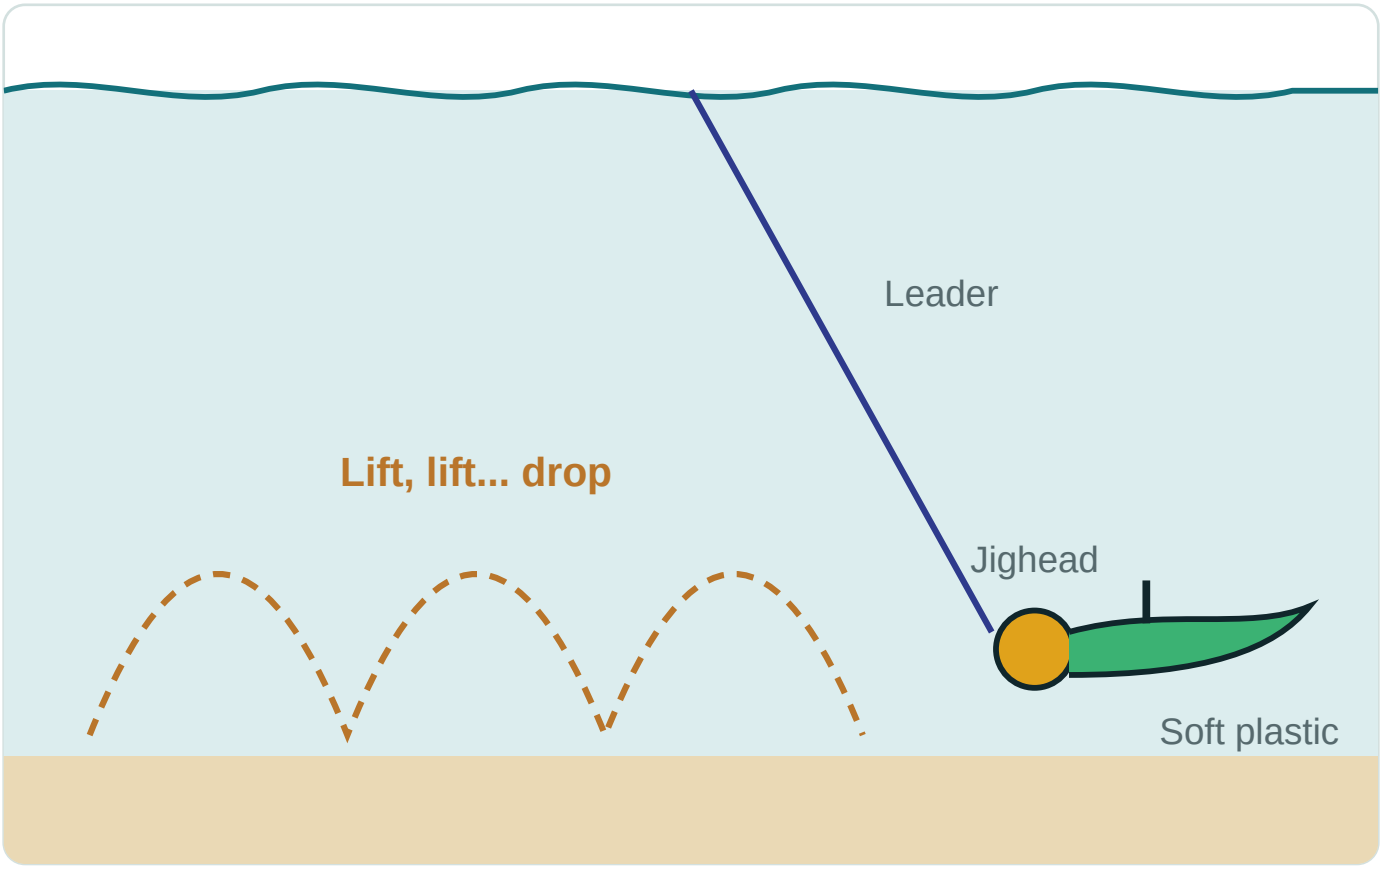
FISHY FRIENDS GUIDE

Soft plastic on a jighead

Good for: Flathead, Bream, Kingfish, Tailor

A rubbery lure on a weighted hook. No bait needed. Hop it along the bottom and flathead can't resist.



YOU NEED

Jighead (1/8 to 1/4 oz, hook size 1/0 to 2/0), 3 to 4 inch soft plastic, leader line.

STEPS

1. Tie the jighead to your leader with a uni knot.
2. Push the hook point into the very front of the plastic.
3. Slide the plastic up the hook, then push the point out through the top so the lure sits straight.
4. Cast out and count while it sinks until the line goes slack (it's on the bottom).
5. Give the rod two sharp lifts, then let the lure sink back down on a tight line.
6. Most bites come as it sinks. If the line twitches, strike!

KID TIP Lift, lift, drop. Lift, lift, drop. Pretend your lure is a little fish hopping along.

STAY SAFE Jigheads are sharp and heavy. Cast overhead, never sideways near people.
